POLITEKNIK NEGERI LAMPUNG
TAHUN 2026

2.5.1 Praktikum 1: Pembacaan Intensitas Cahaya (LDR) via ADC

The screenshot shows the Arduino IDE interface. The sketch is named "Blink.ino" and is for a "NodeMCU 1.0 (ESP-12E Module)". The code is as follows:

```
1 const int ledPin = 5;
2
3 void setup() {
4   Serial.begin(115200);
5   pinMode(ledPin, OUTPUT);
6   Serial.println("Praktikum 1 - Digital Output Dimulai!");
7 }
8
9 void loop() {
10  digitalWrite(ledPin, HIGH);
11  Serial.println("LED Menyala");
12  delay(1000);
13
14  digitalWrite(ledPin, LOW);
15  Serial.println("LED Mati");
16  delay(1000);
17 }
```

The Serial Monitor shows the following output:

```
LED Menyala
LED Mati
LED Menyala
LED Mati
LED Menyala
LED Mati
LED Menyala
LED Mati
```

The status bar at the bottom indicates "Ln 17, Col 2 NodeMCU 1.0 (ESP-12E Module) on COM4".
